DETAILED ACTION

Claim Objections

Claim 2 is objected to because of the following informalities: The phrase "claim 1(d)" should be changed to "claim 1". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the second reactor stage" in lines 6-7 of the claim. There is insufficient antecedent basis for this limitation in the claim.

Allowable Subject Matter

Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Claims 2-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not disclose a hydroprocessing method which has at least two reaction stages comprising the following steps: passing a hydrocarbon feed into a first reaction stage, which is maintained at hydroprocessing conditions, where it is contacted with a catalyst in a fixed bed and

at least a portion of the feed is converted; combining the resulting effluent with product material from a second reactor stage and passing the combined stream to a separation zone; separating the combined stream into an unconverted liquid effluent and at least one converted stream comprising products having a boiling point below that of the feed; and passing the unconverted liquid effluent to a second reaction stage, said stage comprising a plurality of reaction zones, wherein each zone is maintained at hydrocracking conditions and separation occurs between each zone.
